

## STEM Supplemental Instruction Effectiveness Report Spring 2017

The purpose of this report is to evaluate the effectiveness of Supplemental Instruction (SI) in relation to meeting the STEM program objectives stated below:

- **Objective 2:** Increase the percentage of STEM Academy students and college-wide STEM students who successfully transition from Bridge-to-STEM to STEM by successfully completing both college-level Math and enrollment in at least one core science course.
- **Objective 3:** Increase the percentage of students, especially Hispanics, who complete the Citrus STEM Academy Program as measured by completion of at least one transfer-level Math course, at least one transferable core science course, and completion of a STEM Academy approved project.

Supplemental Instruction is one just activity Citrus College has implemented with the goal of achieving these objectives. Supplemental Instruction, a form of peer-to-peer tutoring, provides regularly scheduled, informal out-of-class review sessions for students who may want additional help.

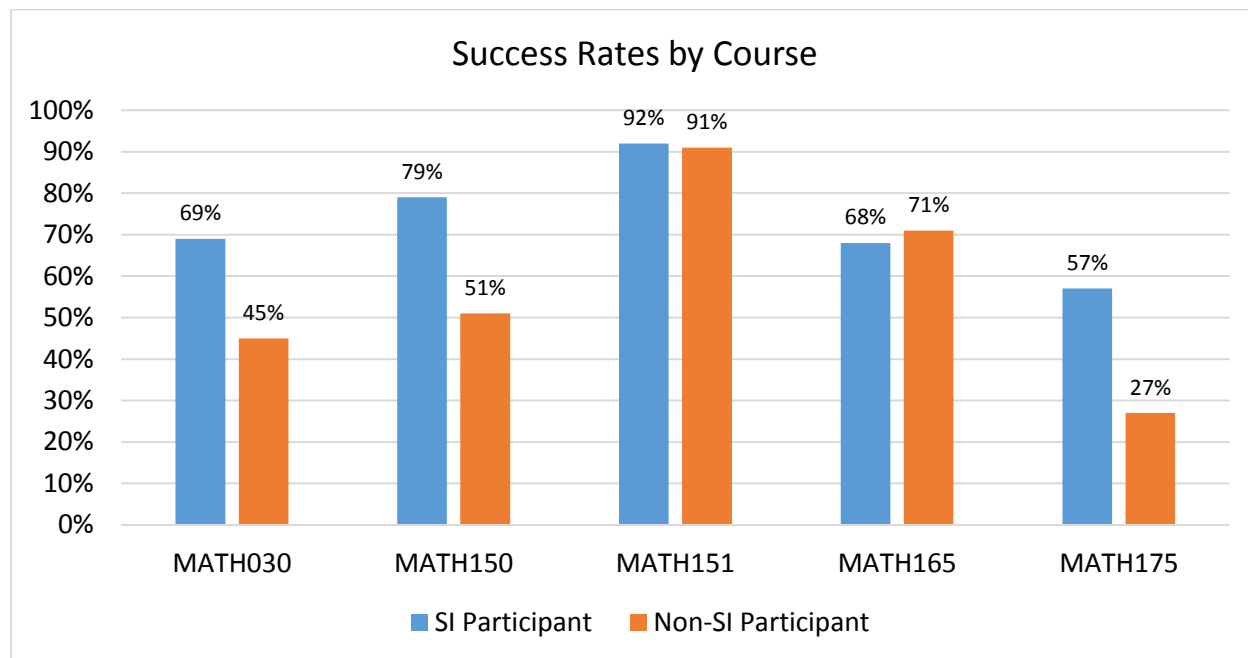

In Spring 2017 Supplemental Instruction (SI) was offered for five courses – MATH030, MATH150, MATH151, MATH165, or MATH175 – for a total of 940 students. There were 321 students that attended at least one SI session and 619 that did not attend at all.

**Table 1** Overall Course Enrollment and SI Participation

| Courses      | # of SI Supported Sections | Enrollment | SI Participants |     | Non-SI Participants |     |
|--------------|----------------------------|------------|-----------------|-----|---------------------|-----|
|              |                            |            | Count           | %   | Count               | %   |
| MATH030      | 8                          | 330        | 106             | 32% | 224                 | 68% |
| MATH150      | 11                         | 424        | 145             | 34% | 279                 | 66% |
| MATH151      | 1                          | 44         | 12              | 27% | 32                  | 73% |
| MATH165      | 3                          | 113        | 44              | 39% | 69                  | 61% |
| MATH175      | 1                          | 29         | 14              | 48% | 15                  | 52% |
| <b>Total</b> | 24                         | 940        | 321             | 34% | 619                 | 66% |

**Success Rates based on SI Participation**

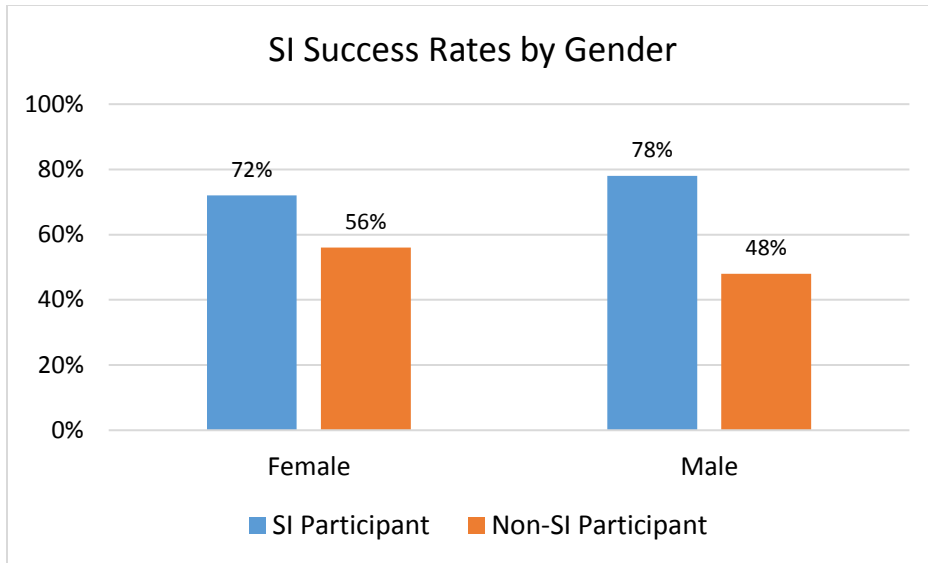

Chi-square tests were used to examine if students who participated in supplemental instruction (SI) were more likely to be successful in MATH030, MATH150, MATH151, MATH165, or MATH175 compared to students who did not participate. Success was defined as students earning a final course grade of A, B, or C. Students earning a final course grade of D, F, FW, or W were considered unsuccessful.

**Figure 1** Success Rates by Course and SI Participation

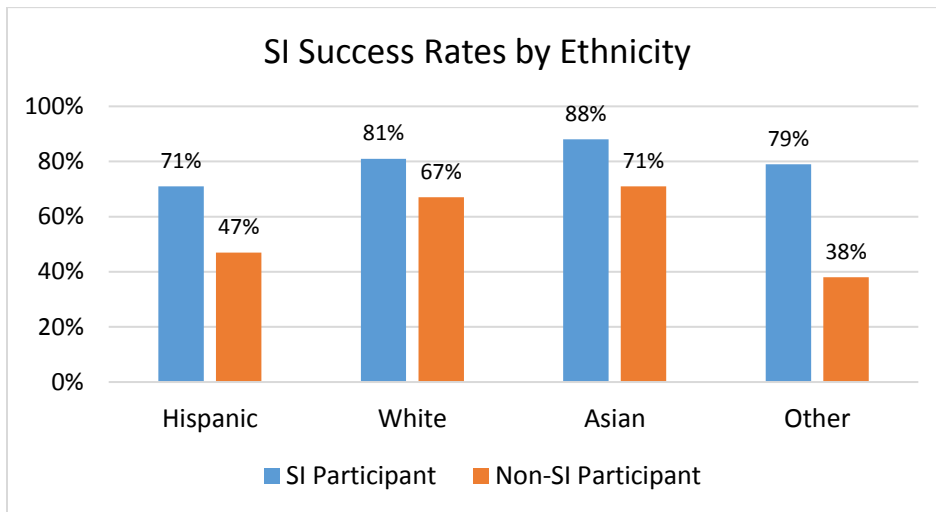

With the exception of students in MATH165, students who attended Supplemental Instruction sessions had higher success rates than students who did not. The results of chi-square tests revealed the success rates were statistically significant for MATH030 and MATH150 students. Specifically, MATH030 SI participants were 69% successful compared to non-SI participants who were 45% successful. Similarly, MATH150 SI participants were 79% successful compared to non-SI participants who were only 51% successful. Even though SI-participants for MATH175 had much higher success rates than non-SI participants (57% vs. 27%), the difference was not statistically significant.

The success rates for all courses broken down by gender and ethnicity are shown in Figure 2 and Figure 3 on the next page. For a detailed look at the demographic success rates for each individual course - MATH030, MATH150, MATH151, MATH165, and MATH175 - please refer to the demographic results beginning on page 9 of this report.

**Figure 2** Success Rates by Gender for All Courses

Overall, females and male students who attended Supplemental Instruction had higher success rates than those who did not attend. As evident by a chi-square analysis, the differences in success rates for females  $\chi^2 (1, N = 527) = 13.17, p < 0.001$  and males  $\chi^2 (1, N = 394) = 29.44, p < 0.001$  were statistically significant.

**Figure 3** Success Rates by Ethnicity for All Courses

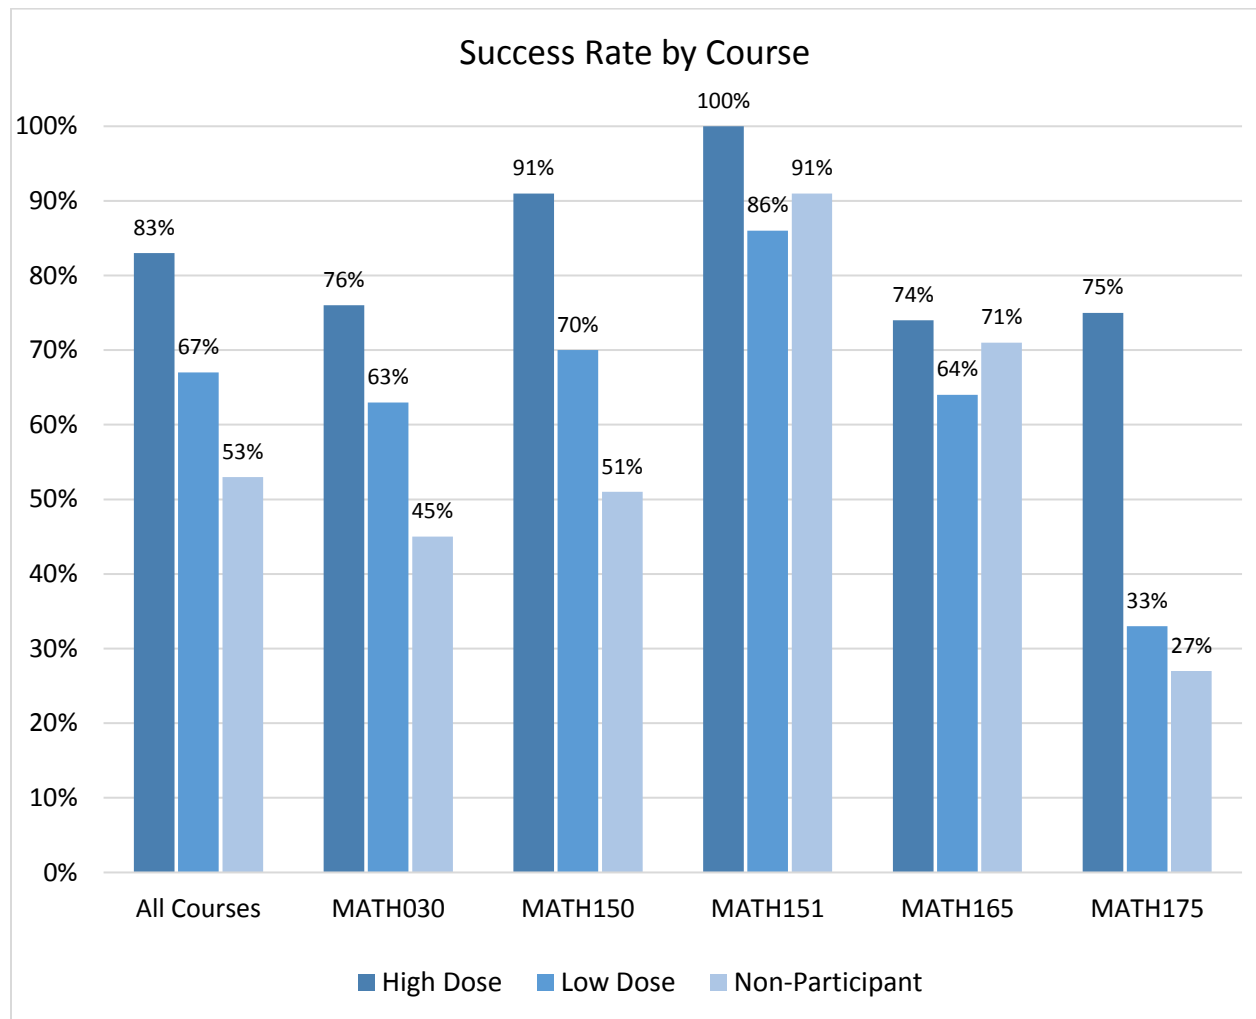

When examining success rates across all courses by ethnicity, students who attended Supplemental Instruction had higher success rates than those who did not attend, regardless of their ethnicity. These higher success rates were statistically significant for Hispanics and students belonging in the “Other Ethnicity” category (i.e. African Americans, students with two or more races, and students who did not disclose their ethnicity).

**Success Rates Disaggregated by Dosage of SI Participation**

To further compare differences among participant groups, SI participation was broken down into two categories: Low Dose (i.e. students attending 1 – 4 SI sessions) and High Dose (i.e. students attending 5 or more SI sessions). Students that did not attending any SI sessions were considered non-SI participants.

In general, students who attended fiver or more SI sessions (i.e. High Dose participants) had the highest course success rate (83%), followed by students who attended 1-4 sessions (67%). Students who did not attend any SI session had the lowest final course grades (53%).

When courses were disaggregated, MATH030, MATH150, and MATH175 showed a similar pattern in which High Dose participants had the highest course success rates while Non-participants had the lowest.

**Figure 4** Success Rates by Course and SI Participation when disaggregated

The results of several one-way ANOVA analyses (which measured success continuously using students' final course grade) revealed that for MATH030, MATH150, and MATH175 the group differences for success rate were statistically significant. Specifically, for MATH030 the only group difference that was significant was between High Dose students (76%) and Non-participants (45%). Similarly, for MATH175 the only group difference that was significant was between the High Dose group (75%) and the Non-participants (27%). For MATH150, all group differences were significant. No significant differences between high dose, low dose, and non-SI participants were found for students enrolled in MATH151 or MATH165.

**Table 2** Summary of one-way ANOVA Results

|                     | <i>df</i> | <i>N</i> | <i>F</i> | <i>p</i> |
|---------------------|-----------|----------|----------|----------|
| <b>All Courses*</b> | 2         | 940      | 29.96    | 0.000    |
| <b>MATH030*</b>     | 2         | 330      | 9.13     | 0.000    |
| <b>MATH150*</b>     | 2         | 424      | 27.63    | 0.000    |
| <b>MATH151</b>      | 2         | 43       | 0.34     | 0.713    |
| <b>MATH165</b>      | 2         | 104      | 2.44     | 0.092    |
| <b>MATH175*</b>     | 2         | 29       | 3.41     | 0.048    |

\*Indicates significance at  $p \leq .05$

### SI's Influence on Course Success: Logistic Regression Analyses

To gain a better understanding of how Supplemental Instruction relates to student success even when taking into account other extraneous variables not controlled for, a hierarchical logistic regression analysis was employed. This analysis examines whether SI participation predicted higher course grades above and beyond other influential factors such as students' pre-existing GPA, gender, and ethnicity. When looking at all courses, the analysis revealed that GPA and ethnicity were significant predictors. Supplemental Instruction was also a significant predictor, above and beyond the effects of students' gender, ethnicity and GPA.

In particular, the odds ratio revealed that as students' GPA increased by a unit, the odds of success increased by a factor of 2.6; in other words students were more likely to be successful if their preexisting, overall GPA was high. Based on the odds ratio for ethnicity, White students were 2 times more likely to succeed compared to Hispanic students which was the comparison group. Similarly, Asian students were found to be over 2 times (2.72) more likely to succeed compared to Hispanic students.

Most importantly, increased visits to SI positively predicted student success, even when taking into account the effects of pre-existing GPA, gender, and ethnicity. The odds ratio showed that high dose students that attended 5 or more SI sessions were over 4 times (4.29) more likely to succeed in their given math course compared to students who did not attend SI at all. Similarly, low dose students that attended 1-4 SI sessions were 1.7 times more likely to succeed in their given math course compared to non-SI participants.

**Table 3** Hierarchical Logistic Regression Examining Predictors of Overall Course Success

| Variables          | B     | S.E. | Wald  | p-value | Odds Ratio |
|--------------------|-------|------|-------|---------|------------|
| <b>Step 1</b>      |       |      |       |         |            |
| Pre-GPA*           | 0.97  | 0.11 | 75.62 | .000    | 2.65       |
| Gender (Female)    | 0.10  | 0.16 | 0.40  | .526    | 1.11       |
| Ethnicity (White)* | 0.73  | 0.25 | 8.67  | .003    | 2.08       |
| Ethnicity (Asian)* | 1.00  | 0.27 | 13.27 | .000    | 2.72       |
| Ethnicity (Other)  | -0.22 | 0.31 | 0.51  | .476    | 0.80       |
| <b>Step 2</b>      |       |      |       |         |            |
| SI (Low Dose)*     | 0.57  | 0.21 | 7.55  | .006    | 1.77       |
| SI (High Dose)*    | 1.46  | 0.26 | 31.91 | .000    | 4.29       |

\*Indicates significance at  $p \leq .05$

Logistic regression analyses were also conducted for each course. The results are summarized below.

For **MATH030** the analysis revealed that GPA, gender, and ethnicity were all significant predictors. Supplemental Instruction was also a significant predictor, above and beyond the effects of students' gender, ethnicity and GPA.

In particular, the odds ratio revealed that as students GPA increased by a unit, the odds of success increase by a factor of 2.3. The odds ratio for ethnicity showed that White and Asian students were over 2 times (2.35 and 2.55 respectively) more likely to succeed in MATH030 compared to the comparison group which was Hispanic students.

Lastly, SI participation (both high and low dose) positively predicted student success, even when taking into account the effects of pre-existing GPA, gender, and ethnicity. Based on the results of the odds ratio, high dose students that attended 5 or more SI sessions were 4 times more likely to succeed in MATH030 compared to students who did not attend SI at all. Similarly, low dose students that attended 1-4 SI sessions were 2 times more likely to succeed in MATH030 compared to students who did not attend SI at all.

**Table 4** Hierarchical Logistic Regression Examining Predictors of MATH030 Course Success

| Variables          | B     | S.E. | Wald  | p-value | Odds Ratio |
|--------------------|-------|------|-------|---------|------------|
| <b>Step 1</b>      |       |      |       |         |            |
| Pre-GPA*           | 0.84  | 0.17 | 25.13 | .000    | 2.31       |
| Gender (Female)    | 0.50  | 0.27 | 3.55  | .060    | 1.65       |
| Ethnicity (White)* | 0.85  | 0.42 | 4.22  | .040    | 2.35       |
| Ethnicity (Asian)* | 0.93  | 0.48 | 3.83  | .050    | 2.55       |
| Ethnicity (Other)  | -0.29 | 0.56 | 0.26  | .609    | 0.75       |
| <b>Step 2</b>      |       |      |       |         |            |
| SI (Low Dose)*     | 0.78  | 0.34 | 5.26  | .022    | 2.18       |
| SI (High Dose)*    | 1.39  | 0.41 | 11.69 | .001    | 4.02       |

\*Indicates significance at  $p \leq .05$

For **MATH150** the analysis revealed that GPA and ethnicity were all significant predictors. Supplemental Instruction was also a significant predictor, above and beyond the effects of students' gender, ethnicity and GPA.

In particular, the odds ratio revealed that as students GPA increased by a unit, the odds of success increased by a factor of 2.2. The results of the odds ratio for ethnicity found that Asian students were over 2 times (2.70) more likely to succeed in MATH150 compared to the comparison group which was Hispanic students.

Lastly, increased SI participation positively predicted student success, even when taking into account the effects of pre-existing GPA, gender, and ethnicity. The odds ratio showed that high dose students were over 8 times (8.20) and Low Dose students were almost 2 times (1.99) more likely to succeed in MATH150 compared to students who did not attend SI at all.

**Table 5** Hierarchical Logistic Regression Examining Predictors of MATH150 Course Success

| Variables          | B     | S.E. | Wald  | p-value | Odds Ratio |
|--------------------|-------|------|-------|---------|------------|
| <b>Step 1</b>      |       |      |       |         |            |
| Pre-GPA*           | 0.83  | 0.16 | 25.31 | .000    | 2.28       |
| Gender (Female)    | -0.14 | 0.25 | 0.34  | .561    | 0.87       |
| Ethnicity (White)  | 0.44  | 0.35 | 1.54  | .214    | 1.55       |
| Ethnicity (Asian)* | 0.99  | 0.41 | 5.91  | .015    | 2.70       |
| Ethnicity (Other)  | -0.20 | 0.45 | 0.19  | .661    | 0.82       |
| <b>Step 2</b>      |       |      |       |         |            |
| SI (Low Dose)*     | 0.69  | 0.33 | 4.46  | .035    | 1.99       |
| SI (High Dose)*    | 2.10  | 0.47 | 20.20 | .000    | 8.20       |

\*Indicates significance at  $p \leq .05$

For **MATH151, MATH165, and MATH175** SI participation was not a significant predictor of success.

**MATH030 Demographic Results**

In MATH030, there were a total of 330 students who earned a final grade in Spring 2017. Of these, 106 students attended at least one SI session, making the overall participation rate 32%. Students who did not attend SI had a lower success rate (45%) while SI participants had a statistically significant higher success rate (69%);  $\chi^2 (1, N = 330) = 16.32, p < 0.001$ .

**Table 6** MATH030 Count and Success Rates by SI Participation

|                     | Successful |     | Unsuccessful |     | Total |      |
|---------------------|------------|-----|--------------|-----|-------|------|
|                     | Count      | %   | Count        | %   | Count | %    |
| SI Participants     | 73         | 69% | 33           | 31% | 106   | 100% |
| Non-SI Participants | 101        | 45% | 123          | 55% | 224   | 100% |
| Total               | 174        | 53% | 156          | 47% | 330   | 100% |

The table and figure below show the breakdown of SI participation and success rates by gender and ethnicity. Females and Hispanic students attended SI the most. In terms of success, students in all groups who attended SI had higher success rates in MATH030 compared to their group counterparts who did not attend any SI sessions. For females, males and Hispanic students, these differences in group success rates were statistically significant.

**Table 7** MATH030 Enrollment by Gender

|                       | Female* | Male* |
|-----------------------|---------|-------|
| SI Participants       | 72      | 32    |
| Non-SI Participants   | 130     | 89    |
| Enrollment Total      | 202     | 121   |
| SI Participation Rate | 36%     | 26%   |

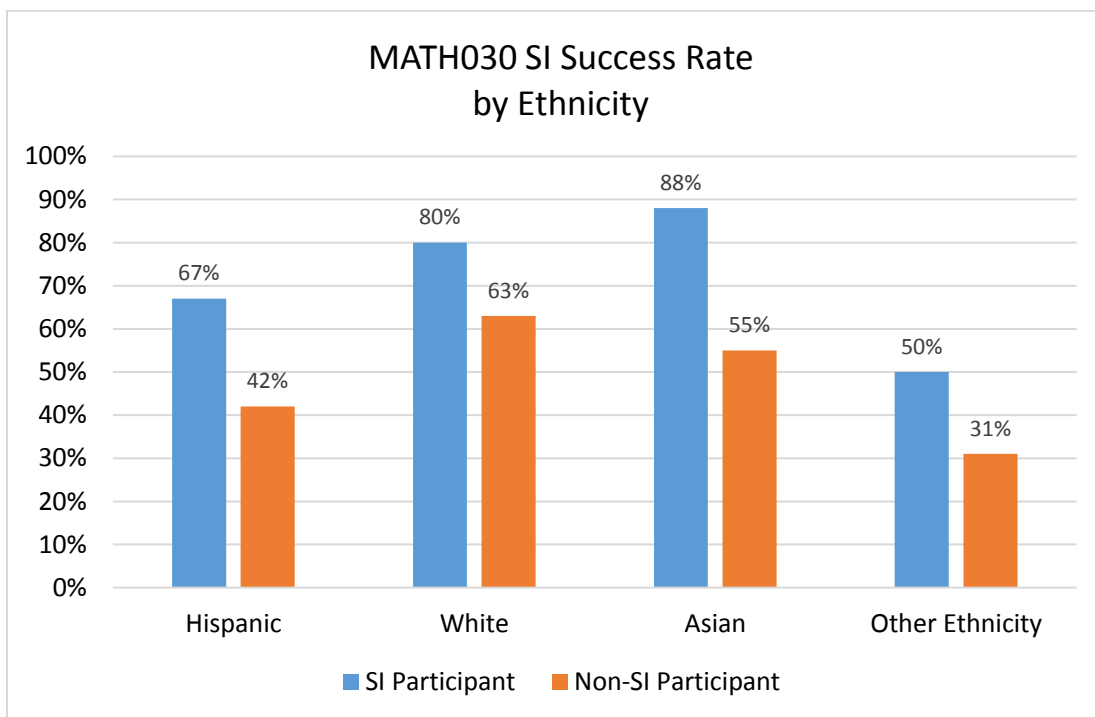

\*Indicates significant group success rate differences at  $p \leq .05$

**Table 8** MATH030 Enrollment by Ethnicity

|                       | Hispanic* | White | Asian | Other Ethnicity |
|-----------------------|-----------|-------|-------|-----------------|
| SI Participants       | 82        | 10    | 8     | 6               |
| Non-SI Participants   | 162       | 27    | 22    | 13              |
| Enrollment Total      | 244       | 37    | 30    | 19              |
| SI Participation Rate | 34%       | 27%   | 27%   | 32%             |

\*Indicates significant group success rate differences at  $p \leq .05$

**MATH150 Demographics Results**

MATH150 had a total of 424 students who earned a final grade in Spring 2017. Of these, 145 students attended at least one SI session, making the overall participation rate 34%. Success rates comparing SI and Non-SI participants in MATH150 revealed that overall, non-participants had a lower success rate (51%) while SI participants had a statistically significant higher success rate (79%);  $\chi^2 (1, N = 424) = 32.27, p < 0.001$ .

**Table 9** MATH150 Count and Success Rates by SI Participation

|                     | Successful |     | Unsuccessful |     | Total |      |
|---------------------|------------|-----|--------------|-----|-------|------|
|                     | Count      | %   | Count        | %   | Count | %    |
| SI Participants     | 115        | 79% | 30           | 21% | 145   | 100% |
| Non-SI Participants | 142        | 51% | 137          | 49% | 279   | 100% |
| Total               | 257        | 61% | 167          | 39% | 424   | 100% |

The tables below show the breakdown of SI participation and success rates by gender and ethnicity. Females and students of “Other” ethnicity participated in SI at a higher rate. In terms of success, students in all groups who attended SI have higher success rates in MATH150 compared to their group counterparts who did not attend any SI sessions. For females, males, Hispanic and “Other Ethnicity” students, these differences in group success rates were statistically significant.

**Table 10** MATH150 Enrollment by Gender

|                       | Female* | Male* |
|-----------------------|---------|-------|
| SI Participants       | 88      | 56    |
| Non-SI Participants   | 139     | 134   |
| Enrollment Total      | 227     | 190   |
| SI Participation Rate | 39%     | 29%   |

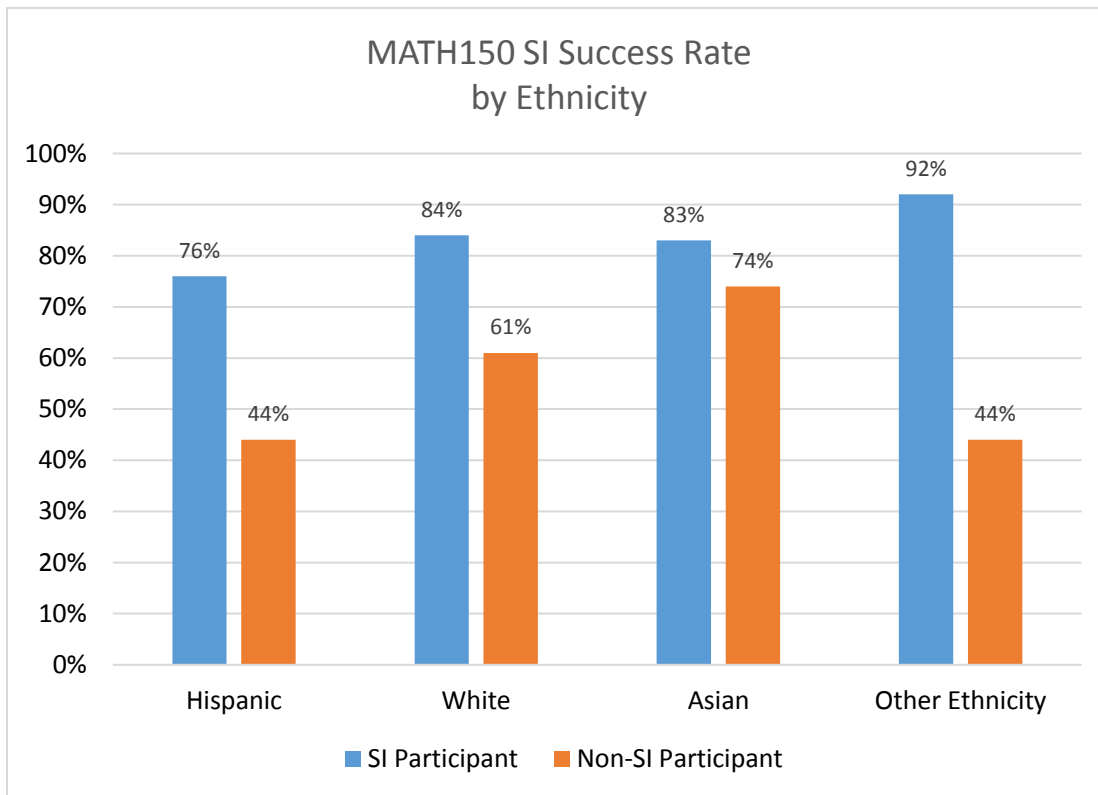

\*Indicates significant group success rate differences at  $p \leq .05$

**Table 11** MATH150 Enrollment by Ethnicity

|                       | Hispanic* | White | Asian | Other Ethnicity* |
|-----------------------|-----------|-------|-------|------------------|
| SI Participants       | 101       | 19    | 12    | 13               |
| Non-SI Participants   | 178       | 41    | 42    | 18               |
| Enrollment Total      | 279       | 60    | 54    | 31               |
| SI Participation Rate | 36%       | 32%   | 22%   | 42%              |

\*Indicates significant group success rate differences at  $p \leq .05$

**MATH151 Demographics Results**

In Spring 2017, MATH151 had a total of 44 students who earned a final grade. Of these, 12 students attended at least one SI session, making the overall participation rate 27%. Students who attended SI had a slightly higher success rate (92%) than students who did not attend (91%). However, this difference in success rates was not significant;  $\chi^2(1, N = 44) = 0.001, p = 0.915$ .

**Table 12** MATH151 Count and Success Rates by SI Participation

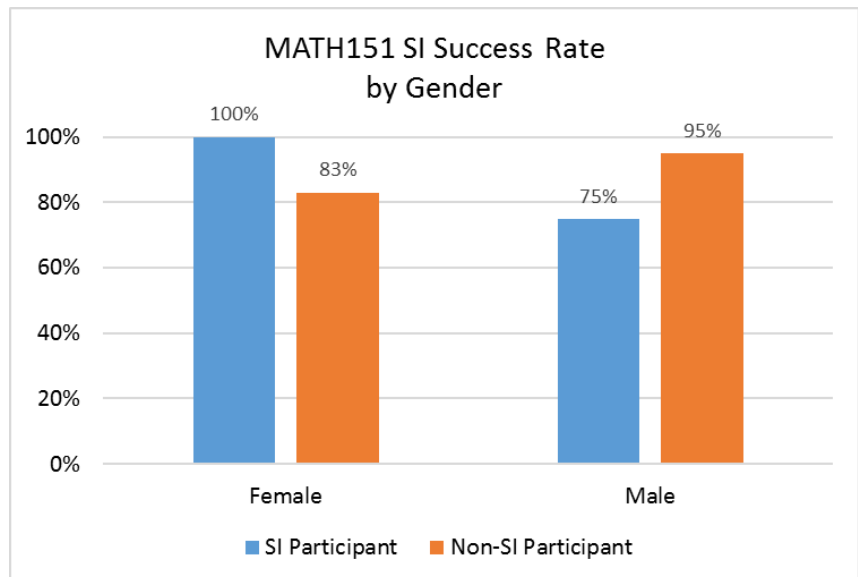

|                     | Successful |     | Unsuccessful |    | Total |      |
|---------------------|------------|-----|--------------|----|-------|------|
|                     | Count      | %   | Count        | %  | Count | %    |
| SI Participants     | 11         | 92% | 1            | 8% | 12    | 100% |
| Non-SI Participants | 29         | 91% | 3            | 9% | 32    | 100% |
| Total               | 40         | 91% | 4            | 9% | 44    | 100% |

The tables below show the breakdown of SI participation and success rates by gender and ethnicity. From these tables we see that females and White students attended SI at a proportionally higher rate. In terms of success, only female and Hispanic students who attended SI had higher success rates in MATH151 compared to their group counterparts who did not attend any SI sessions. None of these differences in success rates however were statistically significant.

**Table 13** MATH151 Enrollment by Gender

|                       | Female | Male |
|-----------------------|--------|------|
| SI Participants       | 8      | 4    |
| Non-SI Participants   | 12     | 20   |
| Enrollment Total      | 20     | 24   |
| SI Participation Rate | 40%    | 17%  |

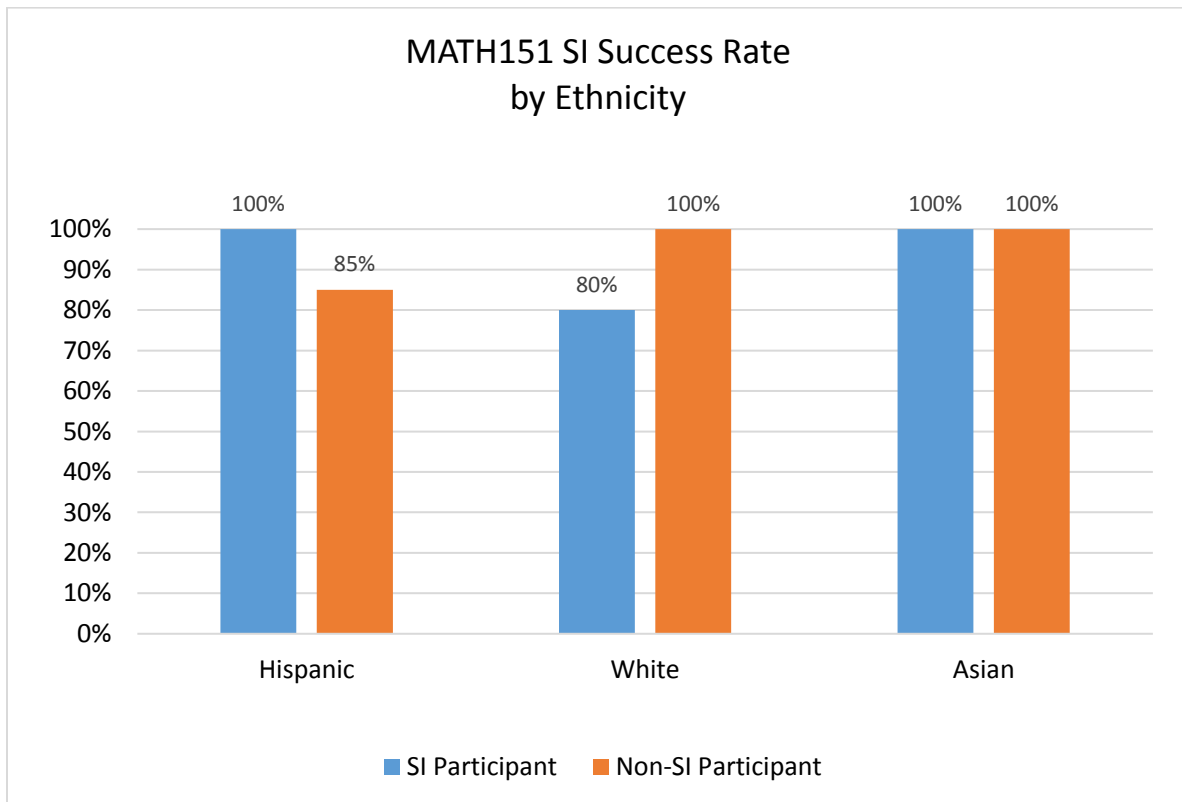

\*Indicates significant group success rate differences at  $p \leq .05$

**Table 14** MATH151 Enrollment by Ethnicity

|                       | Hispanic | White | Asian | Other Ethnicity |
|-----------------------|----------|-------|-------|-----------------|
| SI Participants       | 6        | 5     | 1     | 0               |
| Non-SI Participants   | 19       | 5     | 7     | 0               |
| Enrollment Total      | 25       | 10    | 8     | 0               |
| SI Participation Rate | 24%      | 50%   | 13%   | -               |

\*Indicates significant group success rate differences at  $p \leq .05$

### MATH165 Demographics Results

In MATH165 there were a total of 113 students who earned a final grade in Spring 2017. Of these, 44 students attended at least one SI session, making the overall participation rate 39%. Contrary to expectations, students who attended SI had a lower success rate (68%) compared to Non-SI participants (71%). However, this difference in success rates was not significant;  $\chi^2(1, N = 113) = 0.102, p = 0.749$ .

**Table 15** MATH165 Count and Success Rates by SI Participation

|                     | Successful |     | Unsuccessful |     | Total |      |
|---------------------|------------|-----|--------------|-----|-------|------|
|                     | Count      | %   | Count        | %   | Count | %    |
| SI Participants     | 30         | 68% | 14           | 32% | 44    | 100% |
| Non-SI Participants | 49         | 71% | 20           | 29% | 69    | 100% |
| Total               | 79         | 70% | 34           | 30% | 113   | 100% |

The tables below show the breakdown of SI participation and success rates by gender and ethnicity. Females, Hispanic students, and students of “Other” ethnicity attended SI at a proportionally higher rate. With the exception of female and Hispanics, students who attended SI had higher success rates in MATH165 compared to their group counterparts who did not attend any SI sessions. However, the differences in success rates were not statistically significant.

**Table 16** MATH165 Enrollment by Gender

|                       | Female | Male |
|-----------------------|--------|------|
| SI Participants       | 32     | 12   |
| Non-SI Participants   | 37     | 29   |
| Enrollment Total      | 69     | 41   |
| SI Participation Rate | 46%    | 29%  |

\*Indicates significant group success rate differences at  $p \leq .05$

**Table 17** MATH165 Enrollment by Ethnicity

|                       | Hispanic | White | Asian | Other Ethnicity |
|-----------------------|----------|-------|-------|-----------------|
| SI Participants       | 36       | 2     | 1     | 5               |
| Non-SI Participants   | 45       | 9     | 9     | 6               |
| Enrollment Total      | 81       | 11    | 10    | 11              |
| SI Participation Rate | 44%      | 18%   | 10%   | 45%             |

\*Indicates significant group success rate differences at  $p \leq .05$

**MATH175 Demographics Results**

MATH175 had a total of 29 students who earned a final grade in Spring 2017. Of these, 14 students attended at least one SI session, making the overall participation rate 48%. Non-participants had a lower success rate (27%) while SI participants had a much higher success rate (57%). Due in part to the low sample size, this difference in success rate was not statistically significant;  $\chi^2(1, N = 29) = 2.77, p = 0.096$ .

**Table 18** MATH175 Count and Success Rates by SI Participation

|                     | Successful |     | Unsuccessful |     | Total |      |
|---------------------|------------|-----|--------------|-----|-------|------|
|                     | Count      | %   | Count        | %   | Count | %    |
| SI Participants     | 8          | 57% | 6            | 43% | 14    | 100% |
| Non-SI Participants | 4          | 27% | 11           | 73% | 15    | 100% |
| Total               | 12         | 41% | 17           | 59% | 29    | 100% |

The tables below show the breakdown of SI participation and success rates by gender and ethnicity. From these tables we see that males and Hispanic students attended SI at a proportionally higher rate. In terms of success, students in all groups who attended SI had higher success rates in MATH175 compared to their group counterparts who did not attend any SI sessions. The one exception was for females as the success rate for SI and Non-SI participants were equal. However due to the small group size counts, the differences in group success rates were not statistically significant.

**Table 19** MATH175 Enrollment by Gender

|                       | Female | Male |
|-----------------------|--------|------|
| SI Participants       | 3      | 10   |
| Non-SI Participants   | 6      | 8    |
| Enrollment Total      | 9      | 18   |
| SI Participation Rate | 33%    | 56%  |

\*Indicates significant group success rate differences at  $p \leq .05$

**Table 20** MATH175 Enrollment by Ethnicity

|                       | Hispanic | White | Asian | Other Ethnicity |
|-----------------------|----------|-------|-------|-----------------|
| SI Participants       | 10       | 1     | 3     | 0               |
| Non-SI Participants   | 10       | 0     | 5     | 0               |
| Enrollment Total      | 20       | 1     | 8     | 0               |
| SI Participation Rate | 50%      | 100%  | 38%   | -               |

\*Indicates significant group success rate differences at  $p \leq .05$
